TECHNICAL DATA SHEET

THYSIS DRY VERGE SYSTEM FOR INTERLOCKING TILES

The use of traditionally pointed verges is becoming less popular due to the demand of homeowners for a maintenance free property. The use of composition mortar for pointing the verge has many inherent problems, not least the requirement for continuous re-pointing over the years due to the action of frost, rain and differential movement.

Mechanically fixed verge units provide secure fixing with none of the long term problems associated with traditional methods and offer highly cost effective solutions for all weather roofing.

Features:

- Manufactured from UV Stabilised Co-Polymer Polypropylene
- Colours available: Grey – Brown – Terracotta – White - Black
- Unique vernier hole alignment for easy fixing
- Compatible with wet or dry fix ridges
- Accessories: Half-Round and Angled Ridge Caps, End Caps, Starter Units, Batten End caps
- Batten Gauge Range from 265 to 345mm
